2-bounded partitions \leftrightarrow 3-cores

The diagram illustrates the Pieri rule for K - k -Schur functions. It shows the product of a 1-strip (g_1) and a 2-bounded partition ($g_{211}^{(2)}$) resulting in the difference of two 2-bounded partitions ($g_{2111}^{(2)} - 2g_{211}^{(2)}$). The partitions are represented as 5x5 grids of colored dots (red, blue, black) with some cells shaded gray to indicate the addition or subtraction of strips.

2-bounded partitions \leftrightarrow 3-cores

The diagram illustrates the Pieri rule for K -Schur functions. It shows the product of a 1-strip (represented by a single red dot in a box) and a 2-bounded partition (represented by a 5x5 grid of colored dots: red, blue, black). The result is the difference of two 2-bounded partitions: $g_{2111}^{(2)} - 2g_{211}^{(2)}$. The first term, $g_{2111}^{(2)}$, is a 5x5 grid with a shaded box at (1,1). The second term, $2g_{211}^{(2)}$, is a 5x5 grid with a shaded box at (1,1) and a shaded box at (2,2). The diagram shows the 1-strip being added to the 2-bounded partition, resulting in the difference of the two 2-bounded partitions.
