$$s_{\square\square}(x_1, x_2, x_3) = x_1^2 x_2 + x_1^2 x_3 + x_2^2 x_3 + x_1 x_2^2 + x_1 x_3^2 + x_2 x_3^2 + 2x_1 x_2 x_3$$

$$s_r s_\lambda = \sum (1 \text{ or } 0) s_\nu$$

$$s_{\square} s_{\begin{smallmatrix} \square & \square \\ \square & \end{smallmatrix}} = s_{\begin{smallmatrix} \square & \square & \square \\ \square & \end{smallmatrix}} + s_{\begin{smallmatrix} \square & \square \\ \square & \square \end{smallmatrix}} + s_{\begin{smallmatrix} \square & \square \\ \square & \square \end{smallmatrix}}$$

Iterate Pieri rule

$$s_{\mu_1} \cdots s_{\mu_r} s_\lambda = \sum (\# \text{ known tableaux}) s_\nu$$

Schur functions s_λ (cont.)

Pieri rule

Determines multiplicative structure:

$$s_r s_\lambda = \sum (1 \text{ or } 0) s_\nu$$

$$s_{\square} s_{\begin{smallmatrix} \square & \square \\ \square & \square \end{smallmatrix}} = s_{\begin{smallmatrix} \square & \square & \square \\ \square & \square & \square \end{smallmatrix}} + s_{\begin{smallmatrix} \square & \square & \square \\ \square & \square & \square \end{smallmatrix}} + s_{\begin{smallmatrix} \square & \square & \square \\ \square & \square & \square \end{smallmatrix}}$$

Iterate Pieri rule

$$s_{\mu_1} \cdots s_{\mu_r} s_\lambda = \sum (\# \text{ known tableaux}) s_\nu$$

Since $s_{\mu_1} \cdots s_{\mu_r} = s_{(\mu_1, \dots, \mu_r)} + \text{lower order terms}$, subtract to get

$$s_{(\mu_1, \dots, \mu_r)} s_\lambda = \sum c_{\lambda\mu}^\nu s_\nu$$

for well-understood *Littlewood-Richardson coefficients* $c_{\lambda\mu}^\nu$.

- Branching with positive coefficients (Lam et al., 2010):

$$s_{\lambda}^{(2)} = s_{\lambda} + s_{\lambda} + s_{\lambda}$$

The diagram illustrates the branching rule for k -Schur functions. It shows the equation $s_{\lambda}^{(2)} = s_{\lambda} + s_{\lambda} + s_{\lambda}$. The first term on the right is $s_{\lambda}^{(3)}$ (a 3x2 rectangle). The second and third terms are $s_{\lambda}^{(3)}$ (a 3x1 vertical rectangle). Brackets indicate that the second and third terms are grouped together as $s_{\lambda}^{(3)}$.

$$s_{\lambda}^{(2)} = s_{\lambda}^{(3)} + s_{\lambda}^{(3)}$$

k -Schur functions

- $s_{\lambda}^{(k)}$ for $\lambda_1 \leq k$ a basis for $\mathbb{Z}[s_1, s_2, \dots, s_k]$ (Lapointe et al., 2003).
- Schubert representatives for $H_*(Gr_{SL_{k+1}})$ (Lam, 2008).
- Has a tableaux formulation and Pieri rule: $s_1 r s_{\lambda}^{(k)} = \sum_{\mu} a_{\lambda\mu} s_{\mu}^{(k)}$

- Branching with positive coefficients (Lam et al., 2010):

$$s_{\lambda}^{(2)} = s_{\lambda}^{(3)} + s_{\lambda}^{(3)}$$

The diagram shows the branching of the 2-partition $(2,2)$ into 3-partitions. On the left, $s_{\lambda}^{(2)}$ is represented by a 2x2 grid. This is equal to the sum of two 3-partitions: $s_{\lambda}^{(3)}$ (a 2x2 grid) and $s_{\lambda}^{(3)}$ (a 2x2 grid with an additional cell to the right of the bottom row). Brackets indicate the mapping from the 2-partition to these 3-partitions.

- (Lam et al., 2010) gives geometric interpretation,
- but no combinatorial interpretation of branching coefficients.

k -Schur functions

- $s_{\lambda}^{(k)}$ for $\lambda_1 \leq k$ a basis for $\mathbb{Z}[s_1, s_2, \dots, s_k]$ (Lapointe et al., 2003).

- Has a tableaux formulation and Pieri rule: $s_1^r s_{\lambda}^{(k)} = \sum_{\mu} a_{\lambda\mu} s_{\mu}^{(k)}$
- $s_{\lambda}^{(k)} = s_{\lambda}$ as $k \rightarrow \infty$.
- Branching with positive coefficients (Lam et al., 2010):

$$s_{\lambda}^{(2)} = s_{\lambda} + s_{\lambda} + s_{\lambda}$$

The diagram shows the branching of the 2-Schur function $s_{(2)}^{(2)}$ into three 3-Schur functions. On the left is a 2x2 square representing $s_{(2)}^{(2)}$. This is equal to the sum of three 3-Schur functions: $s_{(2)}^{(3)}$ (a 2x2 square), $s_{(1,1)}^{(3)}$ (a 2x1 square and a 1x1 square), and $s_{(1,1,1)}^{(3)}$ (three 1x1 squares). Brackets below the right side group the three terms under $s_{(2)}^{(3)}$ and $s_{(1,1)}^{(3)}$.

- (Lam et al., 2010) gives geometric interpretation,
- but no combinatorial interpretation of branching coefficients.
- Branching with t important for Macdonald polynomial positivity.

- Branching with positive coefficients (Lam et al., 2010):

$$s_{\lambda}^{(2)} = s_{\lambda}^{(3)} + s_{\lambda}^{(3)}$$

The diagram shows the equation $s_{\lambda}^{(2)} = s_{\lambda}^{(3)} + s_{\lambda}^{(3)}$ with Young diagrams. On the left is the Young diagram for $s_{(2)}^{(2)}$, which is a 2x2 square. On the right are two Young diagrams for $s_{\lambda}^{(3)}$: the first is a 2x2 square (representing $s_{(2)}^{(3)}$) and the second is a diagram with two rows of two boxes each (representing $s_{(1,1)}^{(3)}$). Braces are used to group the terms on the right.

For $1 \leq d \leq k$, set $R_d = ((k + 1 - d)^d)$ to be the k -rectangle partition.

Theorem (S. (thesis), 2021)

For $1 \leq d \leq k$, set $R_d = ((k+1-d)^d)$ to be the k -rectangle partition. Then,

$$\tilde{g}_{R_d}^{(k)} \tilde{g}_{\mu}^{(k)} = \tilde{g}_{\mu \cup R_d}^{(k)},$$

where $\mu \cup R_d$ is the partition given by sorting (μ, R_d) .
